

SIBITHARAN S

Cloud Engineer (Entry-Level) — AWS · Linux · Python · Cloud Support & Operations

Coimbatore, Tamil Nadu, India | +91-9500341745 | sibitharanwolf@email.com

GitHub: github.com/Sibitharan | LinkedIn: www.linkedin.com/in/SibitharanS26

SUMMARY

Cloud-focused Computer Science graduate who builds hands-on AWS projects instead of only watching tutorials. Comfortable deploying on EC2/VPC, securing workloads with IAM and encryption, monitoring with CloudWatch, and troubleshooting Linux and Python-based systems. Recently shipped a cloud-based system serving 5,000 test users at 96% accuracy — now looking to bring the same ownership to a real cloud team.

SKILLS

AWS:

EC2 · VPC · S3 · IAM · DynamoDB · Lambda · CloudWatch · SNS · SES · Rekognition · Route 53 (basics)

Linux & Scripting:

Linux Administration · Bash · Python · Flask · REST APIs

Security & Networking:

IAM Policies · Security Groups · NACLs · Encryption · KMS · Least-Privilege

Databases:

DynamoDB · MySQL · Indexing · Query Optimization

Ops & Monitoring:

CloudWatch Logs & Metrics · Alarms · Troubleshooting · Cost Optimization · Backups

PROJECTS

Smart Attendance System — AWS Face Recognition + Liveness Detection

Python · Flask · AWS Rekognition · DynamoDB · S3 · IAM · CloudWatch · SNS/SES | [GitHub: github.com/Sibitharan/face-recognition-attendance-aws](https://github.com/Sibitharan/face-recognition-attendance-aws)

A cloud-based attendance system that verifies live faces (not photos) and logs attendance automatically on AWS.

- Achieved 96% face-verification accuracy by integrating AWS Rekognition with a Python + OpenCV blink-detection model that blocks photo and video spoofing.
- Cut DynamoDB query latency from 800 ms to 120 ms (~85% faster) by redesigning access patterns with Global Secondary Indexes.
- Reduced estimated storage and database cost by ~35% using DynamoDB TTL and S3 lifecycle policies for old records.
- Secured the system with JWT authentication, role-based access control, IAM least-privilege roles, S3 encryption, and KMS-managed keys.
- Configured CloudWatch logs, metrics, and alarms to monitor API errors, instance health, and attendance activity.
- Implemented multi-AZ EC2 deployment with daily S3 backups, achieving RTO < 1 hour and RPO < 15 minutes.

PUBLICATION

ICETRA'25 Conference Proceedings (Peer-Reviewed) — "Secure Attendance Management Through Blink-Based Liveness Detection and Cloud Integration," 4th International Conference on Enhanced Techniques in Real-Time Applications (ICETRA'25), September 2025. First Author | Proceedings Page 27.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (Completed)
- AWS Academy Graduate – Cloud Architecting | Amazon Web Services

EDUCATION

Bachelor of Science in Computer Science — KG College of Arts and Science, Coimbatore (Bharathiar University) | May 2026
